

AFSSI

Atlantica Fire Safety Systems Inc.

Protecting Lives, Buildings and Equipments

COMPANY BACKGROUND

ATLANTICA, as a specialty contractor, deals with the Consultation, Design Supply and installation of FIRE PROTECTION SYSTEMS such as AUTOMATIC SPRINKLER SYSTEM, CLEAN AGENT FIRE SUPPRESSION SYSTEM, FIRE ALARM & DETECTION SYSTEM, FIRE FIGHTING SUPPLIES AND EQUIPMENTS, PLUMBING AND SANITARY WORKS. The company likewise offers maintenance services as an after sales service.

ATLANTICA was established in 1982 as a company engaged in general merchandising business that attends to the requirements of clients both from the private and public sector.

ATLANTICA is engaged in the provision of indent products for its foreign principals, which the company represents. The product and service offerings then are those that generally cater to the need of clients in the Electrical, Plumbing, and Sanitary and Telecommunications industry.

To aim high and explore the potentials of the fire safety engineering industry, a bold decision that turned out to be a wise move. This decision gave birth to **ATLANTICA Fire Safety Systems Incorporated (AFSSI)**.

In the Fire Protection industry was likewise made possible through the use of fire safety supplies and equipments from world-renowned supplier Kidde Fire Systems. In getting an association and authorized distributorship contract with Kidde Fire Systems Inc. **Kidde Fire Systems, Inc.**, It has boosted our excellent achievements in satisfying the most demanding clients in innovative technology of an automated system for total preventive maintenance, monitoring and activation of FM-200 Fire Suppression System in software design efficacy. Kidde Fire Systems products are listed in the UNDERWRITERS LABORATORIES (UL) and approved by FACTORY MUTUAL (FM).

PRODUCTS AND SERVICES

Suppression

Critical facilities require fire protection systems which can detect and suppress fires quickly without harming equipment, the facility, or the environment. Kidde's suppression portfolio includes clean agents, wet chemical, dry chemical and CO₂.

Clean Agent Fire Suppression System

- FM-200 Fire Suppression system – Kidde ECS Series
- FM-200 Fire Suppression System – Kidde ADS System
- Argonite Fire Suppression System
- Novec 1230 Fire Suppression System
- CO₂ Fire Extinguishing System

High-Sensitivity Smoke Detection

Laser-based high-sensitivity smoke detection system designed to detect fire in the incipient stage. Recommended for critical facilities such as data centers.

Kitchen Fire Suppression (Wet Chemical System)

Kidde WHDR System provides 24-Hour automatic or manual protection for commercial cooking areas; ducts, plenums, hoods and cooking surfaces.

Dry Chemical System

Kidde IND System used for a variety of industrial processes.

Kidde Marine Systems

Kidde offers a variety of systems designed specifically for the marine market under the brand name, Kidde Marine. The Kidde Marine portfolio includes systems such as Kidde ECS & ADS System using FM-200, Kidde Novec 1230 System and Kidde CO₂ System, the Kidde WHDR Galley System and the new Kidde SBS System, a revolutionary system designed specifically for small

PRODUCTS AND SERVICES

Water Leak Alarm and Detection System

Fluid leaks contribute to 27 percent of business downtime, damaging facilities, equipment, and other critical resources. A cooling system leak can take down an entire data center.

Without a customized leak-detection solution in place for your facility, you take a high-stakes risk. Between the cost of repairing or replacing damaged assets, lost productivity, and lost business opportunities the total cost of a fluid leak can escalate quickly.

Automatic Fire Sprinkler System

The Automatic Sprinkler System has two methods:

A wet pipe sprinkler system uses automatic sprinklers attached to a piping containing water and connected to a water supply so water discharges immediately from sprinklers opened by heat from fire.

Dry pipe sprinklers systems are installed in areas with freezing temperatures, having their piping filled with air or sometimes nitrogen under pressure which keeps the valve closed. Reduction in pressure above the dry pipe valve, caused by an activated individual sprinkler head, allows the water to push open and flow out of the open sprinklers.

Fire Detection and Alarm System

The Building Fire detection and alarm system provides audible and /or visible alarm signals from notifications appliances as the result of the operation from automatic smoke detectors, or the manual stations commonly known as alarm initiating devices.

The Control panel connected by wiring to the alarm stations, located at stairs or exits, with notification appliances are placed such a way all occupants can hear the alarm signals when the system activates.

PRODUCTS AND SERVICES

Fire Hydrant System

Fire Hydrants are devices connected to water mains for use in directing water through the hydrant and into the fire department hoses and apparatus in order to disperse the water as needed. When the Fire is located in areas where they might be struck by motorized vehicles, safety flanges in the valve stem and barrel are provided.

Pre Action System

The Pre-action system is utilized mainly for protections against fire in Computer Room and for protecting Electronic Equipment and other critical areas. It is used where large quantities of water are needed quickly to control a fast-developing fire. A normally close valve is opened by a separate detection system allowing water to enter the dry piping system upon detection of fire. It has closed sprinklers allowing water to flow until heat from the fire activates the operating element, the glass bulb.

Foam and Deluge Water Spray System

The Foam Sprinkler System is used principally for protecting flammable liquid hazards, such as petroleum storage and dispensing facilities, and aircraft hangars. Special open sprinkler are used to aspirate the foam solution to produce the foam blanket for a specified period of time. Generally activated by the head detectors or manual stations, a foam proportioning system is used to inject the foam concentrate into the water supply.

Stand Pipe System

Stand Pipe Systems are installed in the building or structure with hose connections located in such a manner that water can be discharged through the attached hoses and nozzles. These hose connections are fed by a supply pipe or risers and are located throughout the facility, usually on each floor.

Atlantica Fire Safety Systems Inc.

Products and Services

Portable Fire Extinguishers

The Badger family of portable extinguishers are perfect for all your commercial, industrial and domestic needs. Kidde Fire Systems offers multiple types of extinguishers to ensure we carry the right model for your application:

AR-AFFF Foam Extinguisher

Contains an Alcohol-Resistant (AR) type of Aqueous Film Forming Foam (AFFF) that is specifically formulated for optimum use in a hand portable fire extinguisher.

Extra ABC Multipurpose Dry Chemical Extinguisher

Designed to meet the occupancy requirements in most commercial, industrial and domestic environments

Standard ABC Multipurpose Dry Chemical Extinguisher

Designed to meet the occupancy requirements in most commercial, industrial and domestic environments.

Extra BC Dry Chemical Extinguisher

For occupancies that do not require Class A ratings.

Carbon Dioxide Extinguisher

A supplement to ABC Dry Chemical, CO₂ safeguard against fires involving electrical equipment and flammable liquids.

PRODUCTS AND SERVICES

Portable Fire Extinguishers (Cont.)

Class D Dry Powder Extinguisher

Where concentrations of metal shavings or powder require supplemental fire protection solutions.

Halotron-1 Extinguisher

Safe, clean and environmentally-friendly solutions for protection of sensitive electronic equipment.

Wheeled Carbon Dioxide Extinguisher

Clean agent that leaves no residue

Wheeled Dry Chemical Stored Pressure Extinguisher

Three sizes and three agent choices in an easy-to-maneuver, single operator unit.

Service and Maintenance on call 24/7

All fire protection systems and equipment.

Atlantica supervisor shall be on call twenty-four (24) hours a day, seven (7) days a week for emergencies.

Response to the call shall be within three (3) hours.
